# IDA

## Intelligent Debriefing With Analytics

[OrbusInfotech.com](http://OrbusInfotech.com)

# What is IDA?

A comprehensive incident management software that tracks, analyses and collates incident data from multiple sources into a single debriefing report, and provides real time data on past incidents coupled with predictive analytics to forecast future incidents and their potential causes.

IDA answers the What, Why and How of any incident by documenting causes, effects, patterns, and results onto a single encrypted file, thus easing compliance, boosting efficiency and improving management decisions.

## Why is IDA beneficial for you?

Identify incidents that previously went undetected

Provide a comprehensive post incident analysis into What, Why and How an incident happened

Help predict future incidents through a constantly improving Machine Learning algorithm

Fully Automated Data Collection using RPA technology

Seamless coordination between different operational verticals for more integrated solutions

Define more effective and relevant Standard Operating Procedures (SOPs)

# Features of IDA

## Social Media Hash Tagging and Indexing

IDA scans all social media platforms for any hashtags related to an incident and includes that data (audio, text, video) to create a real time, holistic final debriefing report.

## Comparative SOP Analysis

IDA provides an summary of SOPs met for every incident, allowing clients to review viability of current SOPs and thereby improve or adjust accordingly.

## Dashboard Integration

IDA offers an in built dashboard to display data on client provided metrics through graphical charts and visualizations that can improve decision making and provide better understanding of current trends.

## Advanced Encryption

IDA is encrypted with the highest level encryption standard to ensure all client files, data and final debriefing reports are extremely secure.

## Multiple Data Inputs

IDA leverages data from multiple sources such as audio, video, sensor, GPS, and screen recordings to provide a 360 degree view of an incident.

## Intelligent Searching

IDA offers the option of returning any audio, video, or screen recording files related to the keyword searched.

## Language Localization

Allows user to select either English or the local language for a more integrated user experience and reduce documentation errors.

## Predictive Analysis

IDA uses Artificial Intelligence and Machine Learning (AI/ML) technologies to predict future incidents, thus allowing clients to improve their resource allocation.

# Who we are?

The Orbus Venn diagram represents a marriage of innovation and foresight – signifying our ability to identify market gaps and meet the complex needs of our clients. Our purpose exists at this intersection, enabling us to create state-of-the-art solutions for the client's requirements

## Mission

To disrupt the way incidents are analyzed and bring forth a more comprehensive debriefing solution for businesses across the globe

## Vision

To set the global standard for incident management through our innovative and technology driven solutions
